Screen posture at home — a one-page handout from Sample Family Chiropractic

Four small habits for kids who use tablets and phones. Not medical advice; if your child has neck or back pain, book a visit.

1. Eyes up, not screen down

The lower the screen, the further the head drops forward. Bring the screen up to your child's eye level: a stand, a stack of books, a case with a stand built in. If the screen is in their lap, their head is in their lap.

2. The 20-minute reset

Every 20 minutes: stand up, look at something far away for 20 seconds, roll the shoulders back twice. Make it a game: pause the show, race to touch the far wall.

3. Sit back, not forward

Bottom to the back of the seat, feet on the floor or a step, screen in front (not to the side). On the couch, a cushion behind the lower back helps smaller kids.

4. Same rules for the car and the table

Car: screen on a stand or mounted at seat height, not held in the lap. Table: elbows on the table, screen propped up. Floor time: lying on the tummy with the screen propped up beats sitting hunched.

> **Our pick for making #1 automatic:** DigiRoo, a kids' iPad case with a height-adjustable stand (up to 4.4 inches, 25+ positions), designed by a mom in Bermuda. Families from Sample Family Chiropractic get 10% off with code **DRSAMPLE10** at kidsdigitalwellness.com.
